

Celestial Movement

Our sun is a star near the outer edge of the Milky Way Galaxy.

Milky Way Galaxy

Sun

Earth

As the sun revolves around the center of the galaxy, it is also rotating on its axis.

Earth rotates on its axis as it orbits the sun.

The Milky Way is a spiral galaxy, and it looks like a gigantic wheel of stars spinning through space.

The Milky Way Galaxy is rotating on its axis, sort of tumbling "head over heels" in space.

The stars in the Milky Way (including our sun) revolve around the center of the galaxy.

Galaxies orbit other galaxies.
